

Stop Replacing Corroded Valves.

The ONLY ACVs/PRVs with an 8-year warranty

Your ACV is now available with ArmorTek®, a 3-part coating system designed to inhibit Microbiologically Induced Corrosion (MIC).

ArmorTek is a patented, **triple layer advanced coating system** that helps defend against corrosion, extending the life of your ACV/PRV.

1 Durable Primer

**2 Patented Microbial
Inhibitor**

3 Robust Topcoat

Whether you refer to your valve as an ACV (automatic control valve) or PRV (pressure-reducing valve), MIC, a damaging process where microorganisms, like bacteria and fungi produce corrosive byproducts, is enemy #1.

These microorganisms create biofilms on your valve's surfaces, trapping corrosive substances and promoting localized corrosion. Over time, this weakens your valve, leading to leaks, poor performance, and potential failure. MIC poses a significant threat to ACVs/PRVs and can compromise their reliability and functionality.

How it Works:

- ArmorTek coating is applied to select ACVs/PRVs at our U.S.-based factory
- Install as usual.
- Enjoy reliable corrosion protection that will protect your valve and extend its lifespan.

*Microbiologically Induced Corrosion
